Influenza Prevention Based on Chain Of Infection			
Link in Chain of Infection	Influenza Implications	Notes for pharmacy staff	
Infectious agent	Present in environment during flu season	☐ Be aware of current strains and case reporting requirements ☐ Watch the CDC website https://www.cdc.gov/flu/index.htm	
Reservoir	Potentially everyone, some higher risk	□ Promote annual vaccination in everyone age 6 months or older	
Portal of exit	Droplets	Tell patients to Limit contact with people who appear to be sick Isolate themselves if they have the flu and stay home for at least 24 hours or until the fever resolves Wash sheets, pillow cases and blankets weekly and hot water and separate each household members personal items (e.g. toothbrushes, razors) Remind all household members to use disposable tissues, cover their mouths when sneezing or blowing their noses, and wash their hands immediately afterward. Ensure infected family members have trash cans nearby to dispose of tissues and wipes; educate each household member to avoid placing soiled tissues on the ground or nearby surfaces Remind people to keep their hands away from the face and mouth.	
Transmission	Organism can remain active on environmental surfaces	 □ Remind patients to disinfect objects and surfaces such as telephones, computer keyboards, light switches, door knobs, remotes, and children's toys □ The Environmental Protection Agency only allows manufacturers to use words like "sanitize" or "disinfect" on products that have proven ability to kill germs; look for these products. • The most commonly used products are Pine Sol, Clorox, and Lysol • Lemon juice, lavender, and tea tree oil or natural products that have disinfectant properties • A mixture of 1/4 cup chlorine bleach to 1 gallon hot water will also disinfect □ Consider using washing machine or the dishwasher to clean communal items; many items can be washed in these appliances, and using hot settings and soap can disinfect 	

Influenza Prevention Based on Chain Of Infection		
Link in Chain of Infection	Influenza Implications	Notes for pharmacy staff
Portal of entry	Nose/mouth	 □ Advise frequent handwashing (BEST PREVENTIVE METHOD) with soap and water, especially before eating and after using the bathroom. □ If soap is unavailable, alcohol-based hand rubs with at least 60% alcohol are recommended □ Evidence that facemasks prevent influenza transmission is lacking but CDC recommends facemasks when ■ Healthcare personnel enter a room belonging to a patient with suspected or confirmed influenza ■ Patients with suspected influenza leave their rooms, must leave home, or enter a healthcare facility
Vulnerable hosts	Everyone; some people at greater risk	Promote annual influenza immunization, especially among highrisk groups • Children younger than five, especially those younger than 2 • Adults 65 years of age and older • Pregnant women and women up to 2 weeks postpartum • Residents of nursing homes and other long-term care facilities • Native Americans and Alaska Natives
